The Solution to Your Portable Compressor Moisture Problems.

DryAIR 250 // 12-Volt DC Air-Cooled DryAir

Effectively removes harmful moisture from diesel portable compressor discharge air

A heavy-duty moisture separator with manual bleed drain, traps harmful condensed moisture and oil vapor.

Completely self-contained

Packaged in a construction skid with lifting bail and expanded metal heat exchanger guard.

Versatility

Chicago fittings are provided on the inlet and outlet connections for versatility in the field. A ring terminal adaptor for permanent installation to the battery and 10' hose for connections to the compressor are also available.

Includes a 1-micron coalescing filter drain

Controlled by an integral pressure switch

Automatically starts the 12-volt fan when the system is pressurized.

13' power cord with alligator clips

Provides a power connection to the compressors starting battery.

Cools air to within 20° of ambient temperature

PERFORMANCE

MAXIMUM FLOW 250 CFM

MAXIMUM OPERATING PRESSURE 200 psig

MAXIMUM PRESSURE DROP 5 psig

FAN POWER REQUIREMENT 17.5 amps @ 12 volts DC
